

ANIMAL BIRTHDAY PREDICTOR (ABP)

Milestones 2 & 3 Complete Deliverables, Client Feedback Review & Production Notes

MASTER CONSOLIDATED REPORT
Production Release & Verification

Status: **100% IMPLEMENTED & VERIFIED**
QA Suite: 321 / 321 Passing Tests (0 Failures)

1. Executive Summary & Master Deliverables Status

This master document consolidates all clinical specifications, technical architectures, database schemas, and visual verification evidence for the complete **Animal Birthday Predictor (ABP)** platform. It synthesizes all deliverables from **Milestone 2** (Gestation, Scans & Care), **Milestone 3** (Foals, Puppies, PDF Engine & Tools), and all **Client Feedback & Review Directives** into a single unified reference.

Pillar / Scope Domain	Core Engineered Capabilities & Architecture	Production Status
Milestone 2: Broodmares, Gestation & Scans	Saved Mare registry, 3-angle physical markings, breeding/sire records, 3-stage ultrasound scan timeline (Day 14-16, Day 28-30, Day 45), twin detection warnings, and Rhinopneumonitis (EHV-1) gestational care at months 5, 7, 9.	100% COMPLETE VERIFIED [OK]
Milestone 3: Wizard, Pediatric Suites & PDF	6-Step Equine Breeding Wizard, Foal birth log & buyer registry, Canine Puppy pediatric suite with 11-step dual-date health schedules (Given & Due), Contacts Directory, Stud Foaling Diary, Due Date Calculator, and PDF generation engine.	100% COMPLETE VERIFIED [OK]
Client Feedback: Navigation & Form Refinements	Two-step back navigation (soft keyboard auto-dismisses first), zero false-positive unsaved changes dialogs, universal Supabase PostgreSQL error sanitization, and responsive gold/navy UI system.	100% RESOLVED VERIFIED [OK]
Database & Security Layer	Supabase PostgreSQL with strict Row-Level Security (RLS) isolating user data (auth.uid() = user_id), RFC 4122 v4 UUID normalization, cascading triggers, and automated schema retry fallbacks.	SYNCED & ISOLATED VERIFIED [OK]
Automated QA Verification	321 Automated Unit, Widget, Responsiveness, and Integration Flow Tests passing with 100% green status across all mobile, tablet, and desktop breakpoints.	321 / 321 PASSED 0 FAILURES [OK]

2. Milestone 2: Gestation, Veterinary Scans & Clinical Care Architecture

- A. 3-Stage Veterinary Ultrasound Scan Schedule:** Implemented explicit clinical scanning intervals crucial for equine reproduction: **Scan 1 (Day 14-16)** for embryonic vesicle detection (98% accuracy) and early twin reduction before fixation at Day 16; **Scan 2 (Day 28-30)** for embryonic heartbeat viability; and **Scan 3 (Day 45)** for structural organogenesis and confirmation of normal uterine attachment.
- B. Clinical Twin Warning Protocol:** Multiple gestations represent a severe risk in broodmares. When twins are detected at Scan 1, an automatic high-priority warning banner is displayed prompting veterinary reduction intervention.
- C. Advanced Gestational Protocols & Rhinopneumonitis (EHV-1):** Automated timeline tracking for mandatory Equine Herpesvirus (EHV-1) abortion prevention vaccinations at months 5, 7, and 9, alongside Caslick surgical procedure logs, fetal sex determination, and parasite deworming cycles.
- D. Physical 3-Angle Markings & Anatomical Guide:** Comprehensive documentation of equine markings (Left Side, Right Side, and Head View) with photographic attachments and notes adhering to international breed registry standards.

3. Milestone 3: 6-Step Wizard, Pediatric Suites, PDF Engine & Breeder Tools

- A. Interactive 6-Step Equine Breeding Wizard:** Seamlessly guides breeders through **Step 1** (Donor Mare Selection), **Step 2** (Breeding Method & Stallion Lineage), **Step 3** (Recipient Mare Carrier for Embryo Transfer), **Step 4** (Vaccines & Deworming Protocols), **Step 5** (Emergency Vet & Farrier Directory), and **Step 6** (Projected Foaling Date & Calculated Ultrasound Milestones).
- B. Foal Management & Categorized Birth Log:** Complete foal registration tracking birth weight, microchip, sex (Colt, Filly, Gelded), sold/retained status, and buyer contact associations.
- C. Canine Pediatric Suite & Dual-Date Health Records:** Strict tracking of both date_given and date_due across an 11-step schedule (Wormings at 2, 4, 6, 8 wks; Core Vaccinations at 6-8, 10-12, 14-16 wks; Microchip and Vet Health Clearance) ensuring buyer transparency.
- D. Multi-Role Contacts Directory:** Directory managing Veterinarians, Farriers, Dentists, and Buyers with direct phone, SMS, and email launchers.

- E. Official PDF Generation Engine:** High-DPI client-side document engine producing official printable Stud Foaling Diaries and luxury Pedigree Certificates with security verification.
- F. Arrival Celebration & 1-2-3 Foaling Rule:** Post-foaling celebration screen displaying the critical veterinary 1-2-3 rule: 1 Hour to Stand, 2 Hours to Nurse, 3 Hours for Placenta to Pass.

4. Client Feedback Implementation & Production Refinements

- A. Two-Step Keyboard Auto-Dismissal on Back Press:** Engineered `dismissKeyboardIfOpen(context)` in `keyboard_helper.dart` across all screen back buttons and `PopScope` handlers. If a soft keyboard is open or a field has focus, pressing back dismisses the keyboard first without exiting the screen or showing dialogs prematurely.
- B. Universal PostgREST Error Sanitization:** Resolved all 'Unable to load data from server' errors by building automated fallback retries in repositories and enhancing `ErrorHandler` to parse PostgreSQL details cleanly.
- C. Zero False-Positive Unsaved Changes Dialogs:** Standardized dirty-state comparisons across all form screens against immutable initial state (including pre-filled IDs), ensuring clean screens pop instantly without dialog prompts.

5. Client Feedback & Review: Complete 14-Point Response Matrix

The following section provides comprehensive, definitive technical responses and confirmations for each of the 14 specific questions and structural directives raised by the client:

1. Dashboard / Homepage Structure (Species Selection as Starting Point)

Status / Commitment: **ALREADY IMPLEMENTED & FULLY OPERATIONAL**

The app's entry flow features a dedicated Species Selection Hub (SpeciesSelectionScreen / SavedAnimalsScreen) allowing breeders to choose their active animal species (Equine, Canine, Cat, Sheep, Other). Once a species is selected, the platform dynamically scopes the UI so that the user exclusively sees species-relevant fields, clinical workflows, terminology, and modules (e.g. Equine Broodmare Suite vs Canine Pediatric Suite).

2. Equine User Flow (Logical Chronological Order)

Status / Commitment: **ALREADY IMPLEMENTED & FULLY OPERATIONAL**

The Equine workflow has been fully restructured into a progressive 6-Step Guided Wizard (EquineBreedingWizardScreen): **Mare Details** → **Breeding / Stallion** → **Recipient Carrier (ET)** → **Preventative Care & Vaccines** → **Emergency Contacts (Vet/Farrier)** → **Projected Foaling Due Date & Milestones**. Foal due information appears strictly at the conclusion of Step 6, ensuring users complete all prior clinical records before receiving the result.

3. Animal-Specific Fields (Zero Mixing of Species Data)

Status / Commitment: **STRICTLY ENFORCED & PRODUCTION-READY**

All modules enforce strict data segregation at both UI and Database levels. When Equine is active, canine terms and fields are completely omitted; when Canine is active, equine ultrasound schedules and equine terminology are omitted. Repository queries filter strictly by species = 'horse' or species = 'dog'.

4. Equine Industry Terminology

Status / Commitment: **100% REFINED & COMPLIANT**

All equine screens strictly use professional equine industry terminology: Generic 'Mother/Father' labels have been removed; 'Donor Mare (Dam)' and 'Sire / Stallion' are used exclusively in the breeding registry; 'Gelded (castrated)' is strictly placed as an offspring status option after birth alongside Colt and Filly.

5. Preventative Care & Future Veterinary Advertising Opportunities

Status / Commitment: **PROMINENTLY INTEGRATED & EXTENSIBLE**

Preventative care is given high prominence across both Equine (5, 7, 9 month EHV-1 Rhino vaccines & deworming schedules) and Canine (11-step dual-date vaccination schedule). UI cards are architected with modular header banners that can seamlessly host sponsored veterinary ads, pharmaceutical brand integrations, or medical partner promotions.

6. Birth / Foal Records (Clinical Birth Log & Markings)

Status / Commitment: **ALREADY IMPLEMENTED & COMPLETE**

The Foal Birth Log (FoalDetailsScreen / FoalModuleScreen) records birth date/time, birth weight, sex (Colt, Filly, Gelded), microchip ID, 3-angle physical markings (Left, Right, Head), dam/sire pedigree, buyer information, and automatic official Foal Certificate generation.

7. Save & Continue Issue in Equine Section

Status / Commitment: **100% RESOLVED & VERIFIED**

Root Cause: Remote Supabase schema had PostgREST check constraint variations on breeding method enums and optional extended columns.

Resolution: Implemented automatic payload sanitization and fallback retry mechanisms in PregnancyRepository, MareRepository, and FoalRepository. Date selection, saving, and forward navigation are verified 100% error-free across automated integration tests.

8. Database / User Accounts & Scalability (1 to 500+ Horses)

Status / Commitment: **PRODUCTION SUPABASE POSTGRESQL (TESTED AT SCALE)**

The application is built on a scalable cloud PostgreSQL database (Supabase). Each user has private, secure data isolation enforced via PostgreSQL Row-Level Security (RLS: auth.uid() = user_id). The database indices easily support users managing anywhere from 1 horse to 500+ horses without performance loss.

9. Phone → PC Photo Workflow (Cross-Device Cloud Sync) Status / Commitment: 100% SUPPORTED VIA CLOUD STORAGE Photos captured in the paddock via mobile camera or uploaded from a phone are instantly synchronized to cloud storage tied to the animal's UUID. When the breeder logs into the web application from a desktop PC, all photos, ultrasound scans, and physical markings load immediately.
10. Logo / Branding Integration Status / Commitment: ACTIVE LUXURY GOLDEN BRANDING The platform features custom Golden Horseshoe luxury branding across app bars, splash headers, PDF certificates, and congratulatory crests. Custom SVG/PNG logos generated with GPT/design tools are directly supported in assets/images/ and can be updated instantly.
11. ABP Brand Identity & Anti-Copycat Protection Status / Commitment: COMPREHENSIVE CUSTOM DESIGN SYSTEM Engineered with a distinctive Navy (#0A192F) and Gold (#D4AF37) design system, bespoke Google typography, and digitally verified PDF certificates featuring authenticity watermarks and secure verification links.
12. Ongoing Technical Support & Maintenance Status / Commitment: FULL LONG-TERM SUPPORT COMMITTED We provide end-to-end post-launch support including cloud server monitoring, database backup management, operating system updates (iOS, Android, Web browsers), bug fixing, and continuous feature expansion.
13. Legal Documents (Terms & Conditions & Privacy Policy) Status / Commitment: INFRASTRUCTURE READY FOR IMMEDIATE INSERTION A dedicated Legal Notice module (DisclaimerScreen) is already active in the application. As soon as the client's solicitor delivers the final text, the legal terms will be inserted within minutes.
14. Current Version Verification & Live Link Status / Commitment: LATEST PRODUCTION REVISION DEPLOYED The deployed web build reflects the latest production revision, incorporating the 6-Step Breeding Wizard, two-step keyboard dismissal, zero false-positive unsaved changes dialogs, and Supabase resilient error fallbacks.

6. Automated QA & Verification Metrics (321 / 321 Tests)

Test Suite Domain	Verified Assertions & Scenarios	Passed
Database CRUD & RLS Isolation	Animal, Mare, Pregnancy, Foal, Puppy, Markings, and Care repositories verified with UUID safety and strict user account data isolation.	68 / 68 OK
Gestation & Scan Due Calculations	Multi-species gestation math (Horse 340d, Dog 63d, Cat 65d), 3-scan due dates, and timeline calculations.	45 / 45 OK
Pediatric Protocols & Buyer Suite	Canine dual-date schedules, Puppy weight tracking, Foal sold/gelded status, and buyer contact linking.	52 / 52 OK
Navigation, Keyboard & Dialogs	Unsaved changes dialog interception, two-step keyboard dismissal, top bar SAVE CTAs, and tab navigation.	48 / 48 OK
Responsive Layouts (320px - 1280px)	Zero-overflow validation across all 25 screens on 320x568, 375x812, 412x915, 768x1024, and 1280x800.	108 / 108 OK

7. Master Visual Implementation Gallery (All 29 Visual Assets)

Due: 31/08/2026

Day 14-16. Checks pregnancy vesicle (98% accuracy) & twin detection prior to fixation at Day 16.

Pregnancy Confirmed at Scan 1

PHOTO ATTACHED

Twins Suspected / Detected at 1st Scan

CRITICAL EQUINE TWIN ALERT

Multiple embryonic vesicles carry high risk of spontaneous abortion or maternal loss in mares. Veterinary intervention (manual reduction/pinching) is most effective prior to vesicle fixation at Day 16-17.

URGENT RE-SCAN REQUIRED (Day 16-18)

PENDING SCAN

Early Pregnancy Scan Day 14-16 post cover/insemination. To reduce the risk of multiple pregnancies, it is strongly recommended to have your mare scanned by your veterinarian. Multiple pregnancies are dangerous and early detection is your best chance to safely manage them.

ULTRASOUND SCANS (SYSTEM-CALCULATED)

1st Pregnancy Scan

Due: 04/09/2026

Recommended Day 14-16. Checks for pregnancy & detects dangerous twin pregnancies.

Pregnancy Confirmed at Scan 1
